

GATES INDUSTRIAL POWER TRANSMISSION

A comprehensive product range

Gates Industrial Power Transmission Products

High performance and comprehensive product range

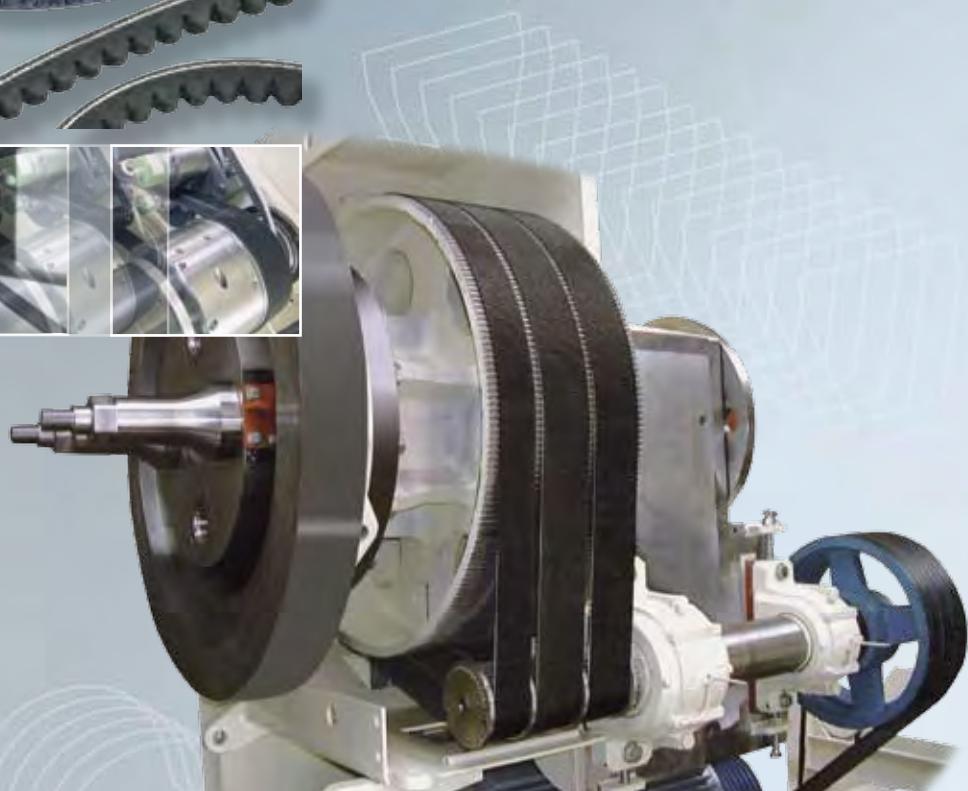

The industrial application range of Gates' power transmission products extends from minimum drives on computer printers or other high-precision tools to industrial compressors and agricultural harvesters.

Gates offers a comprehensive programme of V-belts, synchronous belts, tensioners, pulleys, flexible couplings and complete drive systems covering a multitude of applications.

V-belts

All Gates' industrial V-belts feature high modulus polyester cords that give extremely low elongation. A leading-edge technology delivering the advantages every end-user is looking for: less maintenance and greater cost savings. Premium belts such as the raw edge, narrow section Quad-Power® II, now with increased power ratings and Super HC® MN V-belts ensure excellent performance on the heaviest industrial drives. Gates' Polyflex® JB™ belt range has been extended to include the 3M section.

Synchronous belts

The latest innovation in Gates' synchronous belt drive systems is PowerGrip® GT3. This belt is available in small as well as large pitches and covers the widest range of industrial applications. The PowerGrip® GT3 synchronous belt transmits up to 30% more power than previous generation belts.

The powerful Poly Chain® GT2 polyurethane belt for high torque drives has been upgraded and has up to 40% higher power ratings than previously. Poly Chain® GT2 outperforms roller chain and requires no lubrication or retensioning.

Flexible couplings

Gates has developed its EuroGrip® flexible couplings to connect two shafts subject to misalignment and axial movement. The EuroGrip® range covers all European standard motor systems.

Manufacturing and distribution

Gates PT Industrial has product dedicated production sites in France, Germany, Poland and Scotland. Distribution is handled from two warehouses: Nevers (France) and Langenfeld (Germany).

All Gates European Power Transmission operations are ISO 9001 and ISO 14001 accredited.

Polyurethane belt products

For polyurethane belt products, please contact Gates Mectrol at www.mectrol.com.

All Gates V-belts and PowerGrip® GT3 8MGT & 14MGT belts are static conductive and can as such be used in the conditions described in the Directive 94/9/EC - ATEX.

HEAVY-DUTY V-BELTS

QUAD-POWER® II*Raw edge, moulded notch, narrow section V-belt*

Quad-Power® II is Gates' top of-the-range narrow section V-belt for heavy-duty industrial drives. It has been developed to replace traditional V-belts on applications where space and weight savings are critical: Quad-Power® II is the V-belt with the highest power capacity and can be used on small pulley diameters. Extensive testing has shown that Gates Quad-Power® II V-belt offers up to 15% higher power rating values than previous generations, ensuring the same service life. Improved resistance to outside bends allows the use of back idlers. The unique notch profile makes the belts run smoothly in the pulley grooves.

**Identification**

Durable blue marking indicating type and dimensions.

Construction

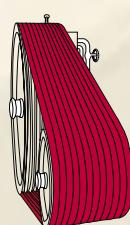

- Raw edge construction.
- Narrow cross-section.
- Optimised notch profile reduces and evenly distributes thermal and bending stresses. Notch depth is in proportion to the cross-section to ensure perfect stability.
- Precision-ground sidewalls give a uniform wedging action.
- Fibre-loaded elastomeric compound withstands heat, ozone and sunlight and provides better cord support.
- Flex-bonded polyester tensile cords are vulcanised as one solid unit, increasing the belt's resistance to tensile and flexing forces.
- Double Flex-Weave® textile backing protects the belt against wear - especially when back idlers are used.
- Cross-cords improve belt stability.
- Even with severe slippage, the belt will not catch fire from heat buildup.
- Static conductive (ISO 1813).

Advantages

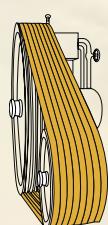

- The most powerful belt in Gates' industrial V-belt range.
- Excellent performance/cost ratio.
- Increased transmission efficiency as compared to other V-belt types.
- Cost and space savings.
- Savings on pulley cost.
- Maximum belt life reducing maintenance time.
- Match system: all sizes meet Gates UNISET tolerances, they can be installed without matching.

HEAVY-DUTY V-BELTS

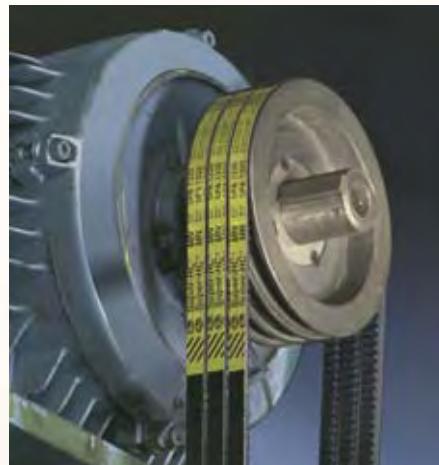

SUPER HC® MN***Raw edge, moulded notch, narrow section V-belt***

In addition to the Super HC® wrapped, narrow section V-belt, Gates markets the Super HC® Moulded Notch V-belt construction.

Super HC® MN V-belts put more power where high speeds, high speed ratios or small pulley diameters are required, thus offering significant advantages over classical section V-belts.

Developed through specialised research, Super HC® MN is highly recommended for use on all industrial heavy-duty, narrow section V-belt drives. The Super HC® MN increased transmission efficiency allows more compact and highly economical drive design.

Super HC® MN belts are available up to 4750 mm ISO datum lengths.

**Identification**

Durable yellow marking indicating type and dimensions.

Construction

- Raw edge construction.
- Narrow cross-section.
- Moulded notches reduce and evenly distribute thermal and bending stresses. The moulded notch pattern also reduces noise.
- Precision-ground straight sidewalls give a uniform wedging action and ensure the belt fits correctly in the pulley grooves.
- Back idlers can be used.
- "Flex-bonded" tensile cords are vulcanised as one solid unit making the belt highly resistant to tensile and flexing forces, fatigue and shock loads.
- Elastomeric compound protects the belt against heat, ozone and sunlight.
- Even with severe slippage, the belt will not catch fire from heat buildup.
- Static conductive (ISO 1813).

Advantages

- Excellent performance/cost ratio.
- More power in the same space or same power in 1/3 to 1/2 less space as compared to classical section V-belts.
- Cost and space savings by reducing size of pulleys, bearings, guards and mounts.
- Improved belt life reducing expensive maintenance time.
- Match system: all sizes meet Gates UNISET tolerances, they can be installed without matching.

Super HC® MN ordering code is composed as follows:

SPZ560MN

SPZ - Section

560 - Datum length (mm)

MN - Moulded notch

Dimensions in bold are available from stock.

HI-POWER®

Wrapped V-belt of classical cross-section

The wrapped classical section Hi-Power® V-belt has a long reputation for reliability on agricultural and industrial applications. The arched top of the Hi-Power® belt provides superior strength to prevent "dishing" and distortion of the tensile section. The cords are properly aligned, each of them carrying its full share of the load.

The Flex Weave® oil and heat resistant cover increases the angle facing the direction of pull. As a result, the Flex Weave® fabric develops even less stress for a given amount of bending.

Identification

Durable red marking indicating type and dimensions.

Construction

- Classical cross-section.
- Arched top, concave sidewalls and rounded corners provide uniform tensile loading and uniform pulley sidewall contact for excellent belt service life and reduced pulley wear.
- The Flex Weave® oil and heat resistant cover protects the belt core from the toughest environments.
- The vulcanised "Flex-bonded" tensile cords provide superior resistance to tensile and flexing forces, fatigue and shock loads.
- High-quality rubber compound protects the belt against heat, ozone and sunlight.
- The belt will not catch fire from heat build-up, even with severe slippage.
- Static conductive (ISO 1813).

Advantages

- Excellent performance/cost ratio.
- Reliability and efficiency.
- Long belt life reducing replacement and maintenance costs.
- Match system: all sizes meet Gates UNISET tolerances, they can be installed without matching.

Hi-Power® ordering code is composed as follows:

Z19

Z - Section
19 - Length in inch

Dimensions in bold are available from stock.

Hi-Power®

Dubl-V

Wrapped, classical section, double V-belt

Gates' Hi-Power® Dubl-V belt is characterised by a double-V profile. It uses flex-bonded tensile cords, which are highly resistant to flexing forces, and a protective Flex-Weave® cover.

It is the ideal solution for "serpentine" drives (drives with counterrotating shafts) where power is transmitted from both the top and the bottom of the belts.

Hi-Power® Dubl-V ordering code
is composed as follows:

AA51

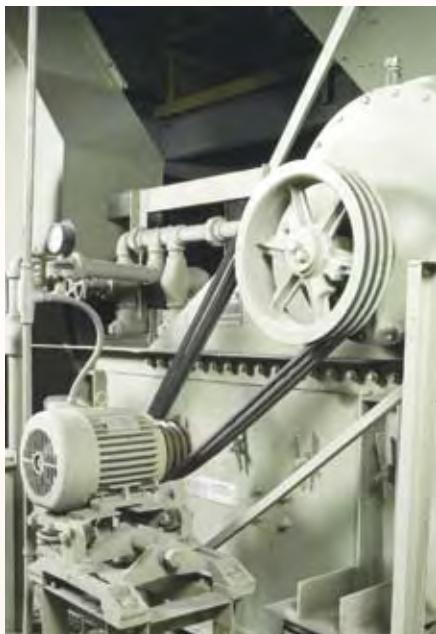

AA - Section (double)
51 - Length in inch (RMA)

Dimensions in bold are available from stock.

VULCOPOWER™

Classical section wrapped V-belt

Gates VulcoPower™ V-belts are built for a reliable and durable performance on heavy-duty industrial drives. They offer a combination of advantages only available in Gates quality belts – all at an attractive price.

Identification

Durable white marking indicating type and dimensions.

Construction

- Belt compound converts forces on the sidewalls into longitudinal forces in the tensile member.
- Textile cover provides grip and protects against abrasion.
- Polyester tensile member withstands occasional or recurrent shockloads.
- Excellent resistance to oil, heat, ozone, sunlight, weather and ageing.
- Static conductive (ISO 1813).

Advantages

- Excellent performance/cost ratio.
- Manufactured according to Gates high quality standards.
- Suited for a wide range of light- to medium-duty power transmission applications and motion transfer.
- Available in all popular lengths and sections
- Match system: all sizes meet Gates UNISET tolerances, they can be installed without matching.

VulcoPower™ ordering code is composed as follows:

C43VULCO

C - Section

43 - Inside length in inch

VULCO - Product short name

Dimensions in bold are available from stock.

VULCOPLUS™

Narrow section wrapped V-belt

If your application requires high speeds, high speed ratios or small pulley diameters, Gates VulcoPlus™ is the ideal solution. This replacement belt is recommended for use on all industrial heavy-duty, narrow section V-belt drives.

Identification

Durable green marking indicating type and dimensions.

Construction

- Belt compound converts tensile forces on the sidewalls into longitudinal forces in the tensile member.
- Textile cover provides grip and protects against abrasion.
- Polyester tensile member withstands occasional or recurrent shockloads.
- Excellent resistance to oil, heat, ozone, sunlight, weather and ageing.
- Static conductive (ISO 1813).

Advantages

- Excellent performance/cost ratio.
- Manufactured according to Gates high quality standards.
- Suited for a wide range of light- to medium-duty power transmission applications and motion transfer.
- Available in all popular lengths and sections
- Match system: all sizes meet Gates UNISET tolerances, they can be installed without matching.

VulcoPlus™ ordering code is composed as follows:

SPA - Section

732 - Datum length (mm)

VULCO - Product short name

Dimensions in bold are available from stock.

QUAD-POWER® II POWERBAND®

Raw edge, narrow section V-belt

Gates Quad-Power® II PowerBand® offers a smooth running solution for drives where single belts vibrate and a stable position in the pulleys. It consists of several V-belts joined together by a permanent, high strength tie band, thus being tougher than all the belts taken separately. Quad-Power® II PowerBand® is easy to install and offers a high resistance to vibrations.

Identification

Durable marking indicating type and dimensions.

Construction

- Narrow cross-section.
- Moulded notch, raw edge construction.
- Strong band controls belt-to-belt distance and prevents sideways bending.
- Flex-bonded tensile cords are vulcanised as one solid unit making the belt highly resistant to tensile and flexing forces, fatigue and shock loads.
- Flat back construction reduces noise when used with a back side idler or tensioner.
- Elastomeric compound protects the belt against heat, ozone and sunlight.
- Static conductive (ISO 1813).

Advantages

- High stability and smooth running on the toughest drives.
- Better resistance to vibrations.
- Temperature ranges from -30°C to +60°C (higher temperatures for shorter periods).
- Important design economies possible.
- Savings in drive space and weight thanks to high transmission efficiency.

HEAVY-DUTY V-BELTS

SUPER HC® & HI-POWER® POWERBAND®

Wrapped, narrow section V-belt

Gates Super HC® PowerBand® offers a solution for drives where single belts vibrate, turn over or jump off the pulleys.

Super HC® PowerBand® is especially developed for drives subjected to pulsating loads. It consists of several V-belts joined together by a permanent, high strength tie band, thus being tougher than all the belts taken separately.

Super HC® PowerBand® is available in SPB, SPC, 8V/25J, 9J and 15J sections. Hi-Power® B, C and D sections are available on request.

Identification

Durable marking indicating type and dimensions.

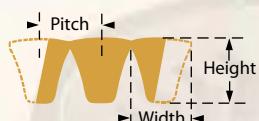

Construction

- Narrow cross-section for Super HC® PowerBand®.
- Wrapped construction.
- Strong band controls belt-to-belt distance and prevents sideways bending.
- Flex-bonded tensile cords are vulcanised as one solid unit making the belt highly resistant to tensile and flexing forces, fatigue and shock loads.
- Concave sides and arched top.
- Flex-Weave® cover protects the belt core from the toughest environments.
- Elastomeric compound protects the belt against heat, ozone and sunlight.
- Static conductive (ISO 1813).

Advantages

- Better resistance to vibrations.
- High stability and smooth running on the toughest drives.
- Temperature ranges from -30°C to +60°C.
- Important design economies possible.
- Savings in drive space and weight thanks to high transmission efficiency.

V-BELTS FOR BACK IDLER AND CLUTCHING APPLICATIONS

POWERATED®*Green textile wrapped V-belt*

PoweRated® V-belt is recommended for heavy-duty drives and clutching applications.

The PoweRated® V-belt meets the requirements of high power, clutching, heavy shock loaded and back idler driven lawn and garden equipment.

**Identification**

Durable moulded marking plus green cover designating PoweRated® as a special capacity belt.

Construction

- Aramid tensile cords.
- Low cord positioning in thin profile gives extreme flexibility.
- Special heavy-duty cord reinforcement and low friction wrapping provide smooth clutching operation.
- Fabric reinforcement on the bottom ensures high crack resistance if back idler is used.

Advantages

- Smooth clutching and disengaging.
- Length stability.
- Special shock resistance.
- Special bending and crack resistance.

Dimensions in bold are available from stock.

NOTE
The circumference is determined by placing a steel tape around the outside of the belt.

**PoweRated® ordering code
is composed as follows:**

3L16

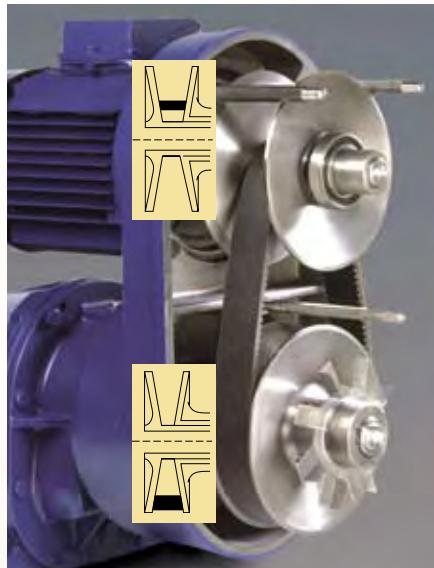

3L - Section
16 - Outside length (inch)

MULTI-SPEED

Raw edge, wide V-belt

Gates Multi-Speed belt provides top performance on variable speed drives. It adjusts itself to the pulley groove without difficulty, providing a wide range of speeds and speed ratios.

In addition to the standard Multi-Speed belt line, special sizes (top width, thickness and angle) are available on request.

Identification

Durable marking plus printed size.

Construction

- Engineered notch contour increases flexibility. The notches ensure maximum heat dispersion, considerably decreasing running temperatures.
- Strong transverse rigidity offers high resistance to distortion of the belt in the pulley. This results in even load distribution and wear reduction.
- Uniform composition and thickness of the undercord ensure smooth and silent running.
- Combination of these construction features gives maximum speed adjustment.

Advantages

- Maximum range of speed changes.
- High load-carrying capacity.
- Smooth machine operation.
- Exceptionally long belt life.

V-BELTS FOR COMPACT DRIVES

POLYFLEX® JB™

Polyurethane multiple V-belt

Polyflex® JB™ is synonymous with high power density in small spaces. Developed by Gates and produced to patented manufacturing processes, Polyflex® JB™ belts provide more load-carrying capacity at higher speeds to small precision multiple V-belt drives. This results in significant cost savings and improved design freedom.

Recommended for use on bench type milling machines, lathe drives, woodworking and metalworking machine spindle drives, computer peripheral equipment, small blowers, etc.

Recently, Gates' Polyflex® JB™ belt range has been extended to include the 3M section.

Identification

Durable marking indicating type and dimension.

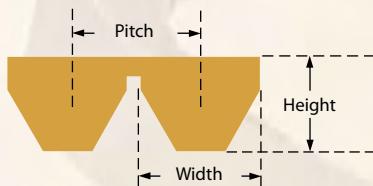

Construction

- Joined belt construction improves stability.
- Ribs relieve bending stress on small pulleys and provide lateral rigidity.
- 60° angle provides more undercord support to the tensile section and distributes the load more evenly.
- Small cross-section meets special application needs such as high shaft speeds, small drive package size and smooth running requirements.
- High modulus polyurethane compound with a high friction coefficient.
- The precise casting method eliminates overlaps and layers.
- Excellent adhesion of tensile cords and polyurethane compound leads to high fatigue resistance and long belt life.
- Extra toughness. The polyurethane compound resists fatigue, wear and ozone.

Advantages

- Long belt life on small pulleys and compact drives.
- Greater shaft speeds, up to 30000 rpm.
- High performance and smooth running for precision applications.
- Cost savings and design freedom.
- Avoids vibrations when subjected to shock loads.
- Temperature ranges from -54°C up to +85°C.

V-BELTS FOR COMPACT DRIVES

POLYFLEX®***Polyurethane V-belt***

This compact and strong belt with nominal top width from 3 mm to 11 mm transmits more power and allows high speed ratios. Polyflex® is suited for extremely small diameter pulleys and very compact drives with high rotational speeds.

Ideal for use on machines and machine tools requiring high performance and smooth operation in limited space such as bench type milling machines, lathe drives, woodworking and metalworking machine spindle drives, computer peripheral equipment, small blowers, etc.

**Identification**

Durable marking indicating type and dimension.

Construction

- Polyurethane compound, superior to conventional belt materials, offers high fatigue and wear resistance and a high friction coefficient. It also improves adhesion to the tensile cords.
- Polyurethane is extremely resistant to heat, chemicals and oil.
- Uniformity throughout Polyflex® is ensured because the polyurethane compound is not layered but cast as a single unit after the positioning of the tensile cords in the mould.
- Ribbed top provides lateral rigidity without increasing bending stresses. The ribs also help to keep Polyflex® belts running cool.
- 60° angle results in better support of the tensile section, and provides a more even load distribution.

Advantages

- Design freedom and space savings which are not possible with conventional rubber construction belts.
- Low maintenance cost as belt needs less retensioning.
- Long belt life on compact drives.
- Temperature ranges from -54°C up to +85°C.

Polyflex® ordering code is composed as follows:

3M600

3M - Rib width 3 mm

600 - Effective length (mm)

Dimensions in bold are available from stock.

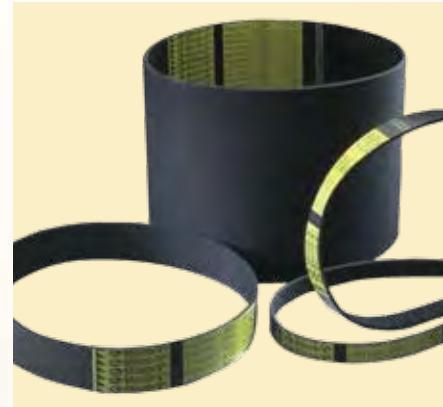

MICRO-V®

Multi-ribbed belt

Through its truncated rib design, Gates Micro-V® multi-ribbed belt ensures an outstanding performance at higher speeds on smaller diameter pulleys.

This smooth-running belt provides a power capacity increase up to 80% higher than RMA standards.

The Micro-V® size range comprises more than 125 standard effective lengths covering a multitude of applications.

Identification

Durable yellow marking indicating type and dimension.

Construction

- Truncated ribs ensure flexibility, reduce heat buildup and improve rib crack resistance.
- High modulus, low stretch polyester tensile member provides superior resistance to fatigue and shock loads.
- All elastomeric rubber compound provides oil and heat resistance.
- Specially formulated fibre reinforced undercord stock improves belt stability.

Advantages

- Extremely smooth and cool running.
- Very high power capacity per rib.
- Long life due to extra load-carrying capacity.
- Improved performance on back idlers.
- Smaller drive package.
- Tolerant of pulley groove debris.

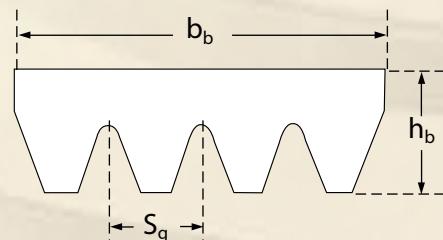

Micro-V® belts are available in PJ, PL and PM cross-sections. The figure below shows a cross-sectional view illustrating the nominal belt dimensions — rib width and belt height. All these belts will operate in standard pulleys provided the pulleys are manufactured to the DIN 7867 or ISO 9982 standard for the specific cross-section.

Nominal top width:

$$b_b = N_r \times S_g$$

Where: N_r = number of ribs

$$S_g = \text{pulley groove spacing}$$

POLY CHAIN® GT2

Synchronous belt in polyurethane

Poly Chain® GT2, Gates' most powerful synchronous belt, has been designed for optimum performance on high torque, low speed drives in any industrial application. This lightweight belt features increased power ratings of up to 40% higher than previous constructions, while maintaining the same long service life.

Poly Chain® GT2 belts operate on Poly Chain® GT pulleys and do not require any adaptation of the system.

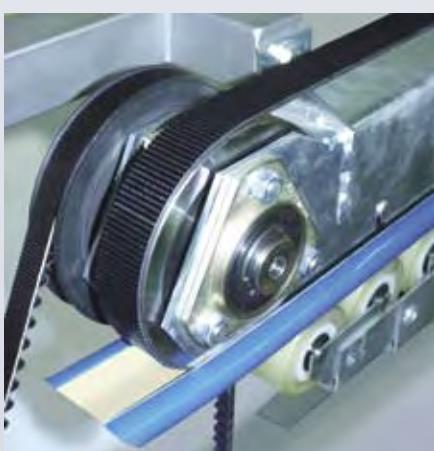

The Poly Chain® GT2 belt construction is based on innovative state-of-the-art design. The body and teeth of the belt are made of a unique polyurethane compound, making the belt tough and virtually immune to abrasion and chemical attack.

Poly Chain® GT2 belts make an excellent alternative to roller chains, requiring neither retensioning nor lubrication. Space-saving, weight-saving and money-saving, Poly Chain® GT2 drives offer a long and reliable service life.

Identification

Three part number on the back of the belt indicating pitch code, pitch length and width.

Construction

- Teeth and body are made of a lightweight polyurethane compound, specially blended for adhesion to the cords and fabric. This uniquely formulated polyurethane makes the belt tough and virtually immune to abrasion and chemicals.
- The aramid tensile cords provide extraordinary power-carrying capacity.
- Flex fatigue life of aramid is exceptional, and its high impact strength withstands shocks and surge loading.
- The fabric covering the teeth is highly resistant to oil, chemicals, pollutants, corrosion and abrasion. It is exceptionally durable and remains fully operational under extreme temperatures from -54°C up to +85°C.
- The fabric facing reduces friction with the pulley, thereby minimising temperature build-up.

Advantages

- Substantially increased power rating.
- High efficiency positive drive.
- Maintenance-free: no lubrication or retensioning needed.
- Savings in space, weight and money.

MINI POLY CHAIN®

Synchronous belt with 8 mm, GT tooth profile

This compact polyurethane synchronous belt opens up new opportunities in the design of conveyor drives and is an alternative to roller chains.

Poly Chain® GT does not require lubrication or tensioning and is characterised by low noise levels even at high transport speeds. The special construction is highly resistant to aggressive influences such as dust, oil and chemicals.

Poly Chain® GT pulley ordering code
is composed as follows:

14M-28S-20

- 14M** - Pitch 14 mm
- 28S** - Number of teeth
- 20** - Belt width (mm)

Dimensions in bold are available from stock.

POWERGRIP® GT3 8MGT & 14MGT

Synchronous belt with optimised GT tooth profile

PowerGrip® GT3 is made of a highly advanced combination of materials. This new, technically advanced belt covers the widest range of industrial applications. The PowerGrip® GT3 synchronous belt transmits up to 30% more power than previous generation belts. This entire belt range is designed to run on existing drives and does not require any adaptation of the system.

The 8MGT and 14MGT pitches are the optimum choice for high performance drives in the machine tool, paper and textile industries where durability and low maintenance are required.

Identification

Three part number on the back of the belt indicating pitch, belt length and width.

Construction

- Technically advanced compound with fibreglass tensile cord, elastomeric teeth and backing and nylon facing.
- Elastomeric backing protects the cords from environmental pollution and frictional wear.
- Helically wound tensile member gives enormous strength, flex life and elongation resistance.
- Low friction nylon facing protects the tooth surface against wear.
- Precision-formed and accurately spaced elastomeric teeth.
- Silicone-free and therefore ideal for painting processes. As contamination risks are excluded, it is the ideal belt for painting installations in the automotive industry.

Advantages

- Substantially increased power ratings: up to 30% more than previous constructions.
- Reduced maintenance costs thanks to longer service life.
- Compact, light-weight and cost-effective drives.
- High tooth jump resistance.
- No lubrication needed.
- Standard static conductive to ISO 9563 and can be used in hazardous explosive areas. Certificates delivered on request.
- Can be used on HTD® type pulleys.

Sections and nominal dimensions

Pitch mm	T mm	B mm
8MGT	8.00	3.40
14MGT	14.00	6.00

NOTE
For correct usage of the belt please request Gates' Synchronous Belt Drive Design Manual (E2/20099).

PowerGrip® GT3 ordering code is composed as follows:

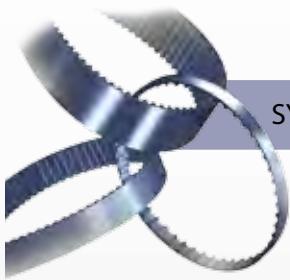

384-8MGT3-20

384 - Pitch length (mm)

8MGT3 - Pitch 8 mm

20 - Belt width (mm)

Dimensions in bold are available from stock.

POWERGRIP® GT3 2MGT, 3MGT & 5MGT

Synchronous belt with optimised GT tooth profile

PowerGrip® GT3 is Gates' latest development in synchronous rubber belts. This new, technically advanced belt covers the widest range of industrial applications. The PowerGrip® GT3 synchronous belt transmits up to 30% more power than previous generation belts. This entire belt range is designed to run on existing drives and does not require any adaptation of the system.

The 2MGT, 3MGT and 5MGT pitches are ideal for compact drives on hand tools, business machines, domestic appliances, high precision servomotor drives and multiaxis applications.

Identification

Three part number on the back of the belt indicating pitch, belt length and width.

Construction

- Technically advanced compound with fibreglass tensile cord, elastomeric teeth and backing and nylon facing.
- Elastomeric backing protects the cords from environmental pollution and frictional wear.
- Helically wound tensile member gives enormous strength, flex life and elongation resistance.
- Low friction nylon facing protects the tooth surface against wear.
- Precision-formed and accurately spaced elastomeric teeth.
- 5MGT is silicone-free and therefore ideal for painting processes. As contamination risks are excluded, it is the ideal belt for painting installations in the automotive industry.
- Can be used on GT type pulleys.

Advantages

- Substantially increased power ratings: up to 30% more than previous constructions.
- Compact drives and less weight.
- Positioning accuracy.
- Improved tooth jump resistance.
- Reduced noise levels.
- Cost-effective, long-lasting and virtually maintenance-free.

Sections and nominal dimensions

	Pitch mm	T mm	B mm
2MGT	2.00	0.71	1.52
3MGT	3.00	1.12	2.41
5MGT	5.00	1.92	3.81

NOTE

For correct usage of the belt please request Gates' Synchronous Belt Drive Design Manual (E2/2009).

285-5MGT3-9

285 - Pitch length (mm)

5MGT3 - Pitch 5 mm

9 - Belt width (mm)

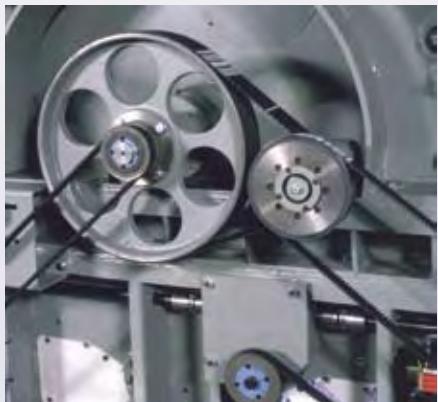

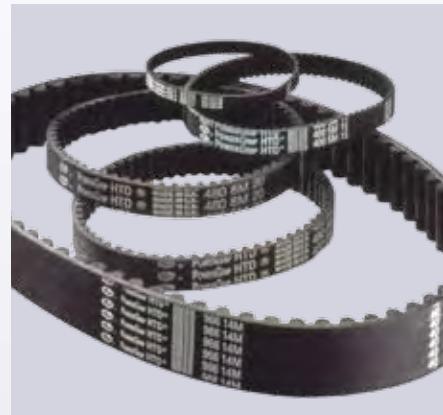

SYNCHRONOUS BELTS FOR HIGH TORQUE DRIVES

POWERGRIP® HTD® 8M, 14M & 20M

Synchronous belt with curvilinear tooth profile

The curvilinear PowerGrip® HTD® tooth geometry eliminates stress concentration at tooth roots and allows higher power capacity and longer life.

PowerGrip® HTD® 8M, 14M and 20M belts are used in high performance drives in the machine tool, paper and textile industries where durability and low maintenance are required.

Identification

Three part number on the back of the belt indicating belt length, pitch and belt width.

Construction

- Special curvilinear tooth form improves stress distribution and allows higher overall loading.
- Precisely formed and accurately spaced elastomeric teeth ensure correct positioning in the pulley grooves.
- Tough nylon facing protects the tooth surfaces.
- Tensile member provides the required strength combined with excellent flex life and high resistance to elongation.
- Durable elastomeric backing protects against environmental pollution as well as frictional wear if power is transmitted from the back of the belt.
- 8M and 14M pitch belts conform to ISO 13050.

Advantages

- Load capacities up to 1000 kW.
- No slippage. PowerGrip® HTD® belt teeth mesh smoothly with pulley grooves, reducing speed variations.
- Wide speed range.
- Economical operation. No lubrication needed, no need for adjustment due to stretch and wear.
- High mechanical efficiency. The belt construction minimises heat buildup and, since friction is not required to transmit the load, belt tensions are reduced.
- Constant driven speeds.
- Long trouble-free service life (because of excellent abrasion resistance) in many applications where metal components like chains and gears wear out in a matter of months.

Sections and nominal dimensions

Pitch mm	T mm	B mm
8M	8.0	3.4
14M	14.0	6.1
20M	20.0	8.4

NOTE

For correct usage of the belt please request Gates' Synchronous Belt Drive Design Manual (E2/20099).

Available in widths of 20 mm, 30 mm, 50 mm and 85 mm.

PowerGrip® HTD® ordering code is composed as follows:

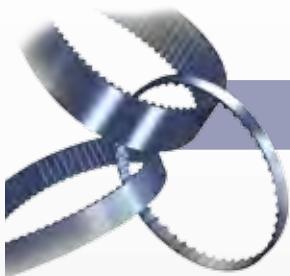

480-8M-20

480 - Pitch length (mm)

8M - Pitch 8 mm

20 - Belt width (mm)

Dimensions in bold are available from stock.

POWERGRIP® HTD® 3M & 5M

Synchronous belt with curvilinear tooth profile

Because of an optimised load distribution, the HTD® curvilinear tooth form guarantees high power transmission in low speed and high torque applications.

PowerGrip® HTD® 3M and 5M belts are suitable for domestic appliances, office machines, electric hand tools and for applications in the processing and chemical industry.

Identification

Three part number on the back of the belt indicating belt length, pitch and width.

Construction

- Special curvilinear tooth design improves stress distribution and allows higher overall loading.
- Precisely formed and accurately spaced elastomeric teeth ensure smooth engagement with the pulley grooves.
- Durable elastomeric backing protects the belt against environmental pollution as well as frictional wear if power is transmitted from the back of the belt.
- Tough nylon facing protects the tooth surface.
- Fibreglass tensile cords.
- Compact design.

Advantages

- 3M and 5M PowerGrip® HTD® are designed for speeds up to 20000 rpm and capacities up to 10 kW.
- The optimised tooth form permits high loads to be transmitted, even in small pitches.
- Peripheral speed up to 80 m/s.
- Efficiencies up to 99%.
- Compact design.
- 25% improved tooth jump resistance.
- Long service life and maintenance-free.

SYNCHRONOUS BELTS FOR A WIDE VARIETY OF APPLICATIONS

POWERGRIP® XL, L, H, XH & XXH

Classical synchronous belt

Gates classical synchronous PowerGrip® belt offers a maintenance-free and economical alternative to conventional drives like chains and gears. Its application range extends from minimum drives (computer printers) to heavy-duty machinery (oil pumps, etc).

Identification

Three part number on the back of the belt indicating belt length, pitch and width.

Construction

- Trapezoidal tooth form.
- Precisely formed and accurately spaced elastomeric teeth ensure correct engagement with the pulley grooves.
- Fibreglass tensile cords.
- Nylon fabric cover protects the tooth surfaces.
- Available in standard pitches according to ISO 5296: MXL, XL, L, H, XH, XXH. For MXL sizes and description, see chapter on PowerGrip® MXL on pages 47-48.

Advantages

- Power transmission of up to 150 kW and speeds of up to 10000 rpm.
- Peripheral speed up to 80 m/s.
- Positive slip-proof engagement.
- Constant angular velocity.
- Efficiencies up to 99%.
- Low bearing load because of freedom of high tension.
- Maintenance-free continuity of operation.
- Wide range of load capacities and speed ratios.
- Compact design.
- Economical operation.

Sections and nominal dimensions

PowerGrip® ordering code is composed as follows:

507-XH-200

507 - Pitch length in 1/10 inch
XH - Pitch 7/8" (22.225 mm)
200 - Belt width 2.0" (50.8 mm)

Dimensions in bold are available from stock.

POWERGRIP® MXL

Classical synchronous belt

The PowerGrip® MXL belt is a classical synchronous belt with a pitch of 0.08" (2.032 mm). It is recommended for applications where maximum synchronisation, small package and high speed are required. Space-saving and highly stable, this belt is the ideal solution to precision drives such as office machines and computers.

Identification

Three part number on the back of the belt indicating belt length, pitch and width.

Construction

- Trapezoidal tooth form.
- Elastomeric backing and teeth combine durability and light weight.
- Nylon facing protects and reinforces the tooth surfaces.
- Fibreglass cords provide length stability and flexibility.

Advantages

- Power transmission of up to 0.8 kW and speeds of up to 20000 rpm.
- MXL belts allow small pulley diameters (from 6 mm diameter) with a maximum number of teeth in mesh.
- Highly suitable for stepper motors.
- Accurate positioning.
- Very stable.

Sections and nominal dimensions

Pitch inch	T mm	B mm
MXL	0.08	0.51

NOTE

For correct usage of the belt please request Gates' Synchronous Belt Drive Design Manual (E2/20099).

Available in widths of 3.2 mm (code 012), 4.8 mm (code 019) and 6.4 mm (code 025).

PowerGrip® MXL ordering code is composed as follows:

288-MXL-019

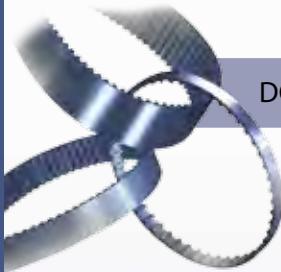

288 - Pitch length in 1/100 inch

MXL - Pitch 0.08" (2.032 mm)

019 - Belt width 0.19" (4.8 mm)

Dimensions in bold are available from stock.

DOUBLE-SIDED SYNCHRONOUS BELTS FOR CONTRA-ROTATING DRIVES

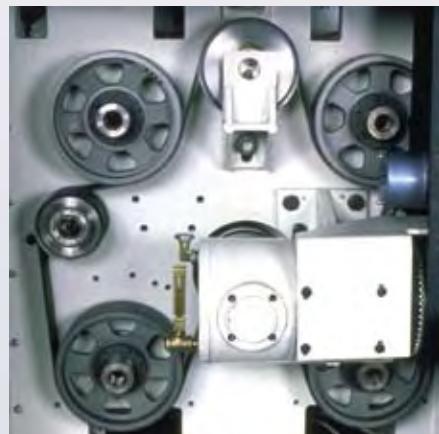

**TWIN POWER®***Double-sided synchronous belt*

Due to its double and directly opposite teeth, Twin Power® synchronous belts ensure high loading capacity on contra-rotating drives and ensure smooth running and high flexibility.

Twin Power® synchronous belts are available with the classical trapezoidal but also with the unique GT tooth profile.

The Twin Power® GT2 belt has twice the power rating of Twin Power® HTD® belts. It is characterised by extraordinary load-carrying power and high tooth jump resistance, thus ensuring a positive non-slip drive. In addition, it runs at very low noise.

Twin Power® is available in PowerGrip® GT2 8MGT and 14MGT, HTD® 5M and PowerGrip® XL, L and H pitches.

**Identification**

Three part number on one side of the belt indicating pitch, belt length and width.

Construction

- Similar in construction to PowerGrip® classical synchronous and PowerGrip® GT2 belts: strong tensile member, precision-formed elastomeric teeth and body.
- Wear resistant nylon fabric on both tooth sides.

Advantages

- High loading capacity.
- Twin Power® can transmit up to 100% of its maximum rated load from either side of the belt; alternatively, it can transmit a load on both sides - provided the sum of the loads does not exceed the maximum capacity.
- Non-slip positive drive.
- Running at low noise.
- Free of lubrication and maintenance.

LONG LENGTH

Open-end synchronous belt

Long Length belting is a special alternative to the timing chain for reversing positioning drives.

Open-end synchronous belting is suitable for linear movements (automated doors, automated warehouse conveyors and elevators), accurate positioning (machine tools, x-y coordinate machines) and reversal drives (computers, printers and office equipment).

Gates Long Length belting is available in various sizes, constructions and tooth designs to cover a wide range of loads, speeds and applications.

Identification

Three part number on the back of the belt indicating product designation, pitch code and belt width.

Construction

PowerGrip® GT 3MR, 5MR and 8MR pitches

PowerGrip® HTD® 3M, 5M, 8M and 14M pitches

PowerGrip® XL, L and H pitches

- Fibreglass or steel tensile cords.
- Rubber teeth and backing.
- Nylon facing.

Poly Chain® 8MGT and 14MGT pitches

- Aramid tensile cord.
- Polyurethane teeth and backing.
- Fabric reinforced teeth.

Advantages

- High positioning accuracy, making the belt ideally suited for applications with repetitive movements.
- High power transmission due to the use of sophisticated materials and tooth profiles.
- Positive power transmission with low axial load.
- Length stability due to the use of high modulus tensile members.
- Easy to attach with clamping fixtures.
- Low maintenance.
- No environmental pollution due to lubricants.

POLY CHAIN® GT2

ST - Steel (material of tensile cords)

Dimensions in bold are available from stock.

TRANSMOTION™

Rubber synchronous belt with conveyor cord

Gates' TransMotion™ is the most powerful rubber belt in the market for conveyor applications. TransMotion™ guarantees a 100% reliability when it is used for assembly lines in the most diverse industries. It outlasts and outperforms roller chain and other high-performance rubber synchronous products.

Identification

Three part number in white on the back of the belt indicating belt length, pitch and width.

Construction

- Technically advanced compound with elastomeric teeth and backing and nylon facing.
- Conveyor cord provides superior tooth jump resistance and shock load resistance. Allows use in wash down applications.
- Supplied in an antistatic version for applications in the electronic industry where electronic discharge needs to be avoided.
- Elastomeric backing protects the cords from environmental pollution and frictional wear.
- Helically wound tensile member gives enormous strength, flex life and elongation resistance.
- Low friction nylon facing protects the tooth surface against wear.
- Precision-formed and accurately spaced elastomeric teeth.

Advantages

- Compact drives and less weight.
- Positioning accuracy.
- Improved tooth jump resistance.
- Reduced noise levels.
- Cost-effective, long-lasting and virtually maintenance-free.
- Can be used on HTD® and RPP pulleys.

Available in widths of 20 mm, 30 mm, 50 mm and 85 mm.

TransMotion™ is only available on request. Please contact your Gates distributor or Gates representative.

TransMotion™ ordering code is composed as follows:

384-8MGT

384 - Pitch length (mm)

8MGT - Pitch 8 mm

POWERPAINT™

Paint and varnish compatible synchronous belt

Gates' PowerPaint™ synchronous belt is specifically developed for use in painting areas, as found in the automotive and white goods industries where contamination of the painted product, from whatever source, is unacceptable. PowerPaint™ ensures excellent performance on skid and roller conveyor systems where there may be a serious risk of product contamination.

Gates PowerPaint™ passes the most stringent tests established by the automotive industry, which requires all components specified for use in a paint and varnish environment to be free of any source of contamination.

Gates' PowerPaint™ belt ensures freedom of lubrication and maintenance, and paint and varnish compatibility. Contamination risks are excluded.

Identification

Three part number on the back of the belt indicating pitch length, pitch code and width.

Construction

- Precision-formed elastomeric teeth with curvilinear profile improve stress distribution and provide high power capacity.
- Accurately spaced teeth provide high positioning accuracy and optimum efficiency.
- Tough tensile cords ensure excellent flex life and high resistance to elongation.
- Available in:
 - Poly Chain® GT2 8MGT and 14MGT pitches
 - PowerGrip® GT3 5MGT, 8MGT and 14MGT pitches
 - PowerGrip® HTD® 3M, 5M, 8M and 14M pitches
 - TransMotion™ 8MGT pitch
 - Long Length PowerGrip® GT 3MR, 5MR and 8MR pitches
PowerGrip® HTD® 3M, 5M, 8M and 14M pitches
PowerGrip® XL, L and H pitches
Poly Chain® 8MGT and 14MGT pitches

Advantages

- Runs well on fixed centre distance drives without elongation and offers long service life.
- No paint contamination risk.

PowerPaint™ ordering code
is composed as follows:

PPT-800-8MGT3

PPT - PowerPaint™
800 - Pitch length (mm)
8MGT3 - Pitch 8 mm (PowerGrip® GT3)

PowerPaint™ is only available on request. Please contact your Gates distributor or Gates representative.

FLEXIBLE COUPLINGS FOR HIGH VIBRATION DAMPING

**EUROGRIP®***Flexible couplings*

EuroGrip® flexible couplings are designed to connect two shafts subject to misalignment and axial movement and relieve the stress that would result from a rigid coupling. Gates EuroGrip® flexible couplings consist of a rubber sleeve and two metal end pieces. The design of Gates EuroGrip® flexible couplings is unique, with its OGEE lines allowing the coupling to act as a torque/life indicator for the drive.

Gates EuroGrip® flexible couplings are available in sizes 19, 28, 42, 48 and 60 and are bored to suit a taper bush or a plain bore and keyway. Gates EuroGrip® flexible couplings have high vibration damping capacity, which makes them especially suitable for direct drive applications in pumps and compressors. Their high compliance is especially appreciated by designers of speed control systems, where resonance can be a problem. The zero backlash characteristics result in high positioning accuracy and repeatability, allowing a wide range of applications in the linear actuator market.

**Construction**

- Unique OGEE lines on the sleeve are an indicator of torque and product life.
- Sleeves are made of a high-performance elastomeric compound. The sleeve design allows the coupling to act as a predictable fuse in the system.
- End pieces are made of a high-grade aluminium to reduce weight and inertia. The aluminium end pieces are anodised to increase wear resistance and strength. Available either with finished bore and keyway or to suit a taper bush.
- Temperature ranges from -25°C to +100°C.

Advantages

- High vibration damping. Damping increases with load, which will prevent resonance.
- Quiet in operation.
- Zero backlash and, consequently, high positioning accuracy.
- Easy to install and to replace. Can be inspected without stopping the drive.
- Built-in safety measure: the driven machine will stop when the coupling fails.
- High tolerance of combinations of radial and angular misalignment.
- Durable.
- Low inertia.
- Compact design.
- Light weight.

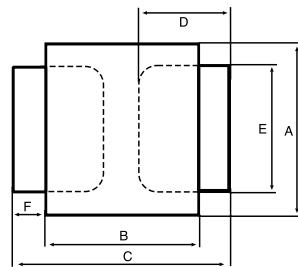

NOTE

For correct usage of the EuroGrip® flexible couplings, please request Gates' EuroGrip® manual (E2/20103).

Sleeve dimensions

The principal dimensions of a EuroGrip® sleeve are the outside diameter, the sleeve length and the total coupling length. Gates EuroGrip® couplings are made in sizes 19, 28, 42, 48 and 60.

Coupling size code	Nominal shaft mm	Sleeve OD mm (A)	Sleeve length mm (B)	Sleeve weight g	Coupling total length mm (C)
19	19	46	28	35	48
28	28	77	38	125	60
42	42	102	48	250	80
48	48	126	58	450	94
60	60	150	65	750	105

End piece dimensions

The principal dimensions of a EuroGrip® end piece are the taper bush size, the bore, the end piece length and the shoulder diameter.

Coupling size code	Back fixed taper bush	Front fixed taper bush	Standard bore mm	End piece length mm (D)	Shoulder diameter mm (E)	Shoulder thickness mm (F)	Over tooth diameter mm	Inertia J kgm²	Weight with MPB (2) g
19 (1)	MPB (2)	MPB (2)	14 / 19	22	42	9	36	0.000009	50
28	1108	1008	24 / 28	28	72	11	62	0.000105	200
42	1615	1215	38 / 42	38	96	16	84	0.000469	550
48	2017	1615	48	45	118	18	104	0.001330	1000
60	2517	2017	55 / 60	50	136	20	120	0.002572	1350

(1) Size 19 available with bore and key only. All other EuroGrip® couplings (sizes 28, 42, 48 and 60) available with bore and key or to suit taper bush. Size 28 with 1108 taper bush requires a shallow key.

(2) MPB = Minimum Plain Bore.

NOTE

End pieces are keyed according to ISO. Bore is to tolerance H7 fit (ISO). End pieces are also available with unfinished bore.

Part numbers

Coupling	Part	Part number	Part	Part number 9902 -
19	Sleeve	9901-51901	14 mm bore end piece 19 mm bore end piece MPB end piece	01914 01919 01900
28	Sleeve	9901-52801	24 mm bore end piece	02824
	End piece for taper bush - back fixed (1108)	9902-02801	28 mm bore end piece	02828
	End piece for taper bush - front fixed (1008)	9902-02802	MPB end piece	02800
42	Sleeve	9901-54201	38 mm bore end piece	04238
	End piece for taper bush - back fixed (1615)	9902-04201	42 mm bore end piece	04242
	End piece for taper bush - front fixed (1215)	9902-04202	MPB end piece	04200
48	Sleeve	9901-54801	48 mm bore end piece	04848
	End piece for taper bush - back fixed (2017)	9902-04801	MPB end piece	04800
	End piece for taper bush - front fixed (1615)	9902-04802		
60	Sleeve	9901-56001	55 mm bore end piece	06055
	End piece for taper bush - back fixed (2517)	9902-06001	60 mm bore end piece	06060
	End piece for taper bush - front fixed (2017)	9902-06002	MPB end piece	06000

507C

Sonic tension meter

Correct belt installation tension is essential for optimum performance and reliability of multi-ribbed, V-belt and synchronous belt drives. The 507C sonic tension meter ensures a simple and extremely accurate tension measurement by analysing sound waves (natural frequencies) from the belt through the sensor. It processes the input signals and gives an accurate digital display of tension.

Gates' tension tester is user-friendly: it is compact, computerised and stores data for repetitive use. Gates' sonic tension tester measures belt tension accurately every time.

It is supplied with a handy instruction manual.

Features

- Stores weight, width and span constants for up to twenty different drive systems.
- New auto gain adjustment function cancels out background noise automatically.
- Shuts off automatically after five minutes of inactivity, making it an energy-saving device.
- Measurement range: 10 Hz to 5000 Hz.
- Flexible sensor (cord and inductive sensor available on request).
- H 160 mm x D 26 mm x W 59 mm.
- Batteries: 2 x AAA.
- Suitable for V-belts, multi-ribbed belts and synchronous belts.
- CE approved.

Optional accessories

Cord sensor

The cord sensor is recommended for measuring tensions at a distance from the tension meter.

Inductive sensor

The inductive sensor is recommended for measurement particularly in noisy or windy environments. A steel clip to the back of the belt is required to measure the vibration frequency.

Sonic tension meter calibrator - model U-305-OS1

This special calibrator (oscillator) is available for the frequency test of the 507C sonic tension meter. This oscillator generates 5 types of oscillations (sine wave): 25, 90, 500, 2000 and 4000 Hz. It features a frequency accuracy of 0.1% or even lower.

CALIBRATOR MODEL U-305-OS1

NOTE

GATES SONIC TENSION METER SHOULD NOT BE USED IN EXPLOSIVE RISK AREAS.

LASER AT-1

Laser alignment device

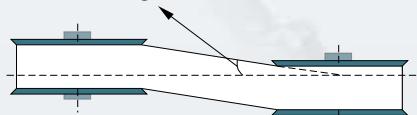

A fast and accurate method to measure misalignment is ensured by Gates' unique laser alignment device, LASER AT-1.

Mounted in a few seconds, the laser line projected onto the targets allows you to quickly ascertain and correct misalignment.

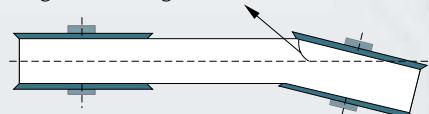

The LASER AT-1 identifies parallel as well as angular misalignment between the pulleys and is suitable for pulley diameters of 60 mm and larger. It is so light it can be mounted on non-magnetic pulleys with the double sided adhesive tape and used on both horizontal and vertical shaft installations.

Parallel misalignment

Angular misalignment

Advantages

- For both V-belts and synchronous belts.
- Shows parallel and angular misalignment between the pulleys.
- Much faster and more accurate than measuring with earlier, conventional methods.
- For both horizontally and vertically shaft machines.
- Alignment can be made by one operator.
- Also suitable for non-magnetic pulleys.

Technical characteristics

• Pulley diameters	≥ 60 mm
• Beam angle	78°
• Measurement distance	10 m (33 ft)
• Battery	1 x R6 (AA) 1.5 V
• Battery operation	8 hours continuously
• Laser class	2
• Output power	< 1 mW
• Laser wave length	635 – 670 nm
• Temperature range	-10°C up to +50°C
• Housing	ABS plastics
• Back plate	Anodised aluminium
• Weight	0.25 kg
• Dimensions	W 147 mm x H 87 mm x D 28 mm

Calibration accuracy

Offset < 0.5 mm
Angle < 0.1°

Targets

2 pieces magnet targets with adjustable centre line

Light weight

Because of its light weight it can be mounted on non-magnetic pulleys with double-sided adhesive tape.

NOTE

THE LASER AT-1 SHOULD NOT BE USED IN EXPLOSIVE RISK AREAS.

SUPPORT

Technical know-how and application engineering

At Gates you do not buy a mere product, you get complete, high performance and customised drive design solutions. When you choose Gates, you get more than the strongest, most advanced Power Transmission product line. Behind our leading industrial products is an entire company of professionals, armed with solutions. Gates offers the kind of support that leads to trust and value.

DesignFlex® calculation software

You may calculate your own application by means of one of Gates' design manuals or by using DesignFlex®, a Windows-based multilingual software program. This software is available on CD-ROM (E/20098) but can also be downloaded from Gates' website at www.gates.com. DesignFlex® runs under Windows 95, 98, 2000, NT, Millennium, requires a Pentium 133 processor or higher and an 800 x 600 screen resolution or higher. A minimum of 32 MB RAM is recommended for satisfactory calculation speed.

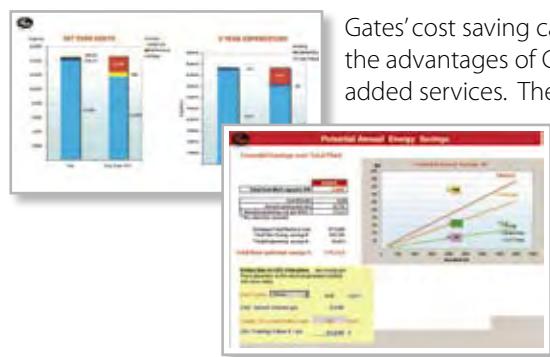

Gates' application engineers at your service

If your application cannot be designed with the aid of Gates' design manuals or the DesignFlex® software, you can always contact Gates' application engineers. They are at your service to solve even the most difficult drive design problem.

Gates' application engineers now use DESIGN IQ, a very powerful software program allowing them to calculate multiple pulley drives for the most diverse complex duty cycles

Gates cost saving calculator

Gates' cost saving calculator contains all the tools and support you need to demonstrate the advantages of Gates' belt drive systems to your customers and reinforce your value added services. The energy saving calculations are based on the best information available and represent the typical saving that can be expected from correctly installed drive systems.

Gates literature

Please consult our web site at www.gates.com for specific and updated information on other Gates industrial belt products and our list of available literature. Industrial Power Transmission brochures and leaflets can be downloaded from the site. Distributors may link up with the Gates European site thus supplying visitors with updated information on the European Gates organisation.

www.gates-online.com

Gates^{online}

Navigate your product choices at online speed

The entire Gates product catalogue is now only one click away. By going online Gates distributors will get the most current information in just seconds – even while their customer is still on the phone. With Gates-online they will enjoy more convenience in finding, ordering and tracking their Gates products. Gates-online is intuitive and easy to use, convenience they will appreciate every day. The Gates electronic price list can also be consulted from the e-commerce web site. Only available for registered Gates distributors.
